

Subash Katwal

+977 9749459199 | subashkatwal112@gmail.com | linkedin.com/in/subashkatwal | github.com/subashkatwal | Kathmandu, Nepal

OBJECTIVE

Computer Science undergraduate with hands-on experience in machine learning and data science fundamentals. Focused on building reliable, data-driven systems using Python, with interests in applied AI and backend-oriented development.

EDUCATION

Tribhuvan University – New Summit College

Kathmandu, Nepal

Bachelor of Science in Computer Science and Information Technology

Jan 2023 – Present

- Relevant Coursework: Data Structures, Algorithms, Database Management, Artificial Intelligence

TECHNICAL SKILLS

Languages: Python, SQL, Javascripts(Basics)

Machine Learning & AI: Scikit-learn, Pandas, Deep Learning (CNN, RNN, Transformers), Agentic AI

Data Science: Pandas, NumPy, Matplotlib, Data Mining, Statistical Analysis

Backend Development: Django, REST APIs

Tools & Technologies: Git, Jupyter Notebooks, LangGraph, N8N

EXPERIENCE

Data Science Intern | Prodigy Infotech (Remote)

December 2024 – January 2025

- Worked on multiple hands-on data science and machine learning projects using Python and Jupyter Notebooks, covering data preprocessing, exploratory data analysis, model training, and evaluation
- Performed data cleaning, feature engineering, and visualization on real-world datasets including Titanic survival prediction, bank customer classification, traffic accident analysis, and Twitter data analysis
- Built and evaluated supervised machine learning models for classification tasks using Scikit-learn
- Analyzed model performance using accuracy and related metrics, iterating on data preparation and feature selection to improve results
- Documented code, experiments, and findings in GitHub repositories to ensure reproducibility and clarity

PROJECTS

BookMood – ML Book Recommendation System | *Python, Scikit-learn, Machine Learning* Jul 2025 – Sep 2025

- Engineered a content-based recommendation engine analyzing user preferences and reading patterns
- Achieved 85% recommendation accuracy through collaborative filtering and content-based algorithms
- Processed and cleaned dataset of 10,000+ books, implementing feature extraction and similarity metrics

Nepal Travel Assistant – AI-Powered Web Application | *Django, Python, ML*

Aug 2025 – Sep 2025

- Built full-stack web application with Django backend integrating machine learning models for travel recommendations
- Developed predictive cost estimation model improving accuracy by 15% using regression techniques
- Implemented intelligent destination recommendation system analyzing user preferences and historical travel data

LangGraph – AI Agent Workflows | *Python, LangGraph, Jupyter*

Sep 2025 – Present

- Architected graph-based intelligent agent systems demonstrating autonomous decision-making capabilities
- Created comprehensive Jupyter notebooks documenting agent logic, tool integration, and workflow orchestration
- Implemented multi-agent systems with state management and dynamic task routing
